WAPANOCCA HERON/EGRET ROOKERY
May 9, 1997
Glen Miller and Chester McGee

The rookery expanded to the southeast this year.

Most of the aluminum tags are on the northerly side of trees containing or at one time containing nests. The group of numbers 1-57 start at ehe ease end and head west. Numbers 58-100 and 100-140 start at the west end and generally head east. Numbers 141-275 are mainly on the east side.

No young were observed in nests. Unknown how many nests were active this year. Nests were found in 70 additional trees this year and 110 more nests were counted above last year. No attempt was made to search for tag numbers not found. 47 tagged trees were not found.
