Charleston Mts.

List of Mammals

Tamias lucurus abundant in the belt of Yucca at upper edge of desert; not seen in Juniper belt. It is probable that the lower edge of this belt marks the boundary between the range of this & the following species

Tamias palmeri sp. nov. Thirteen specimens were procured in vicinity of camp mainly on sunny slopes on north side of cañon.

Hesperomys sp? Mr. Nelson procured two specimens of a very large eared Mouse, in rocks near camp

Hesperomys sp? Mr. Nelson caught some 17 specimens in similar locations. Possibly more than one species is represented

Neotoma — Very abundant in rocks near camp

Thomomys — Abundant from lower edge of timber up to zone of Pinus aristata. Above this point there
