

# Autumn Floral Inventory

## Walnut Creek N.W.R. - Jasper Co., Iowa

September/October, 1991

### User notes:

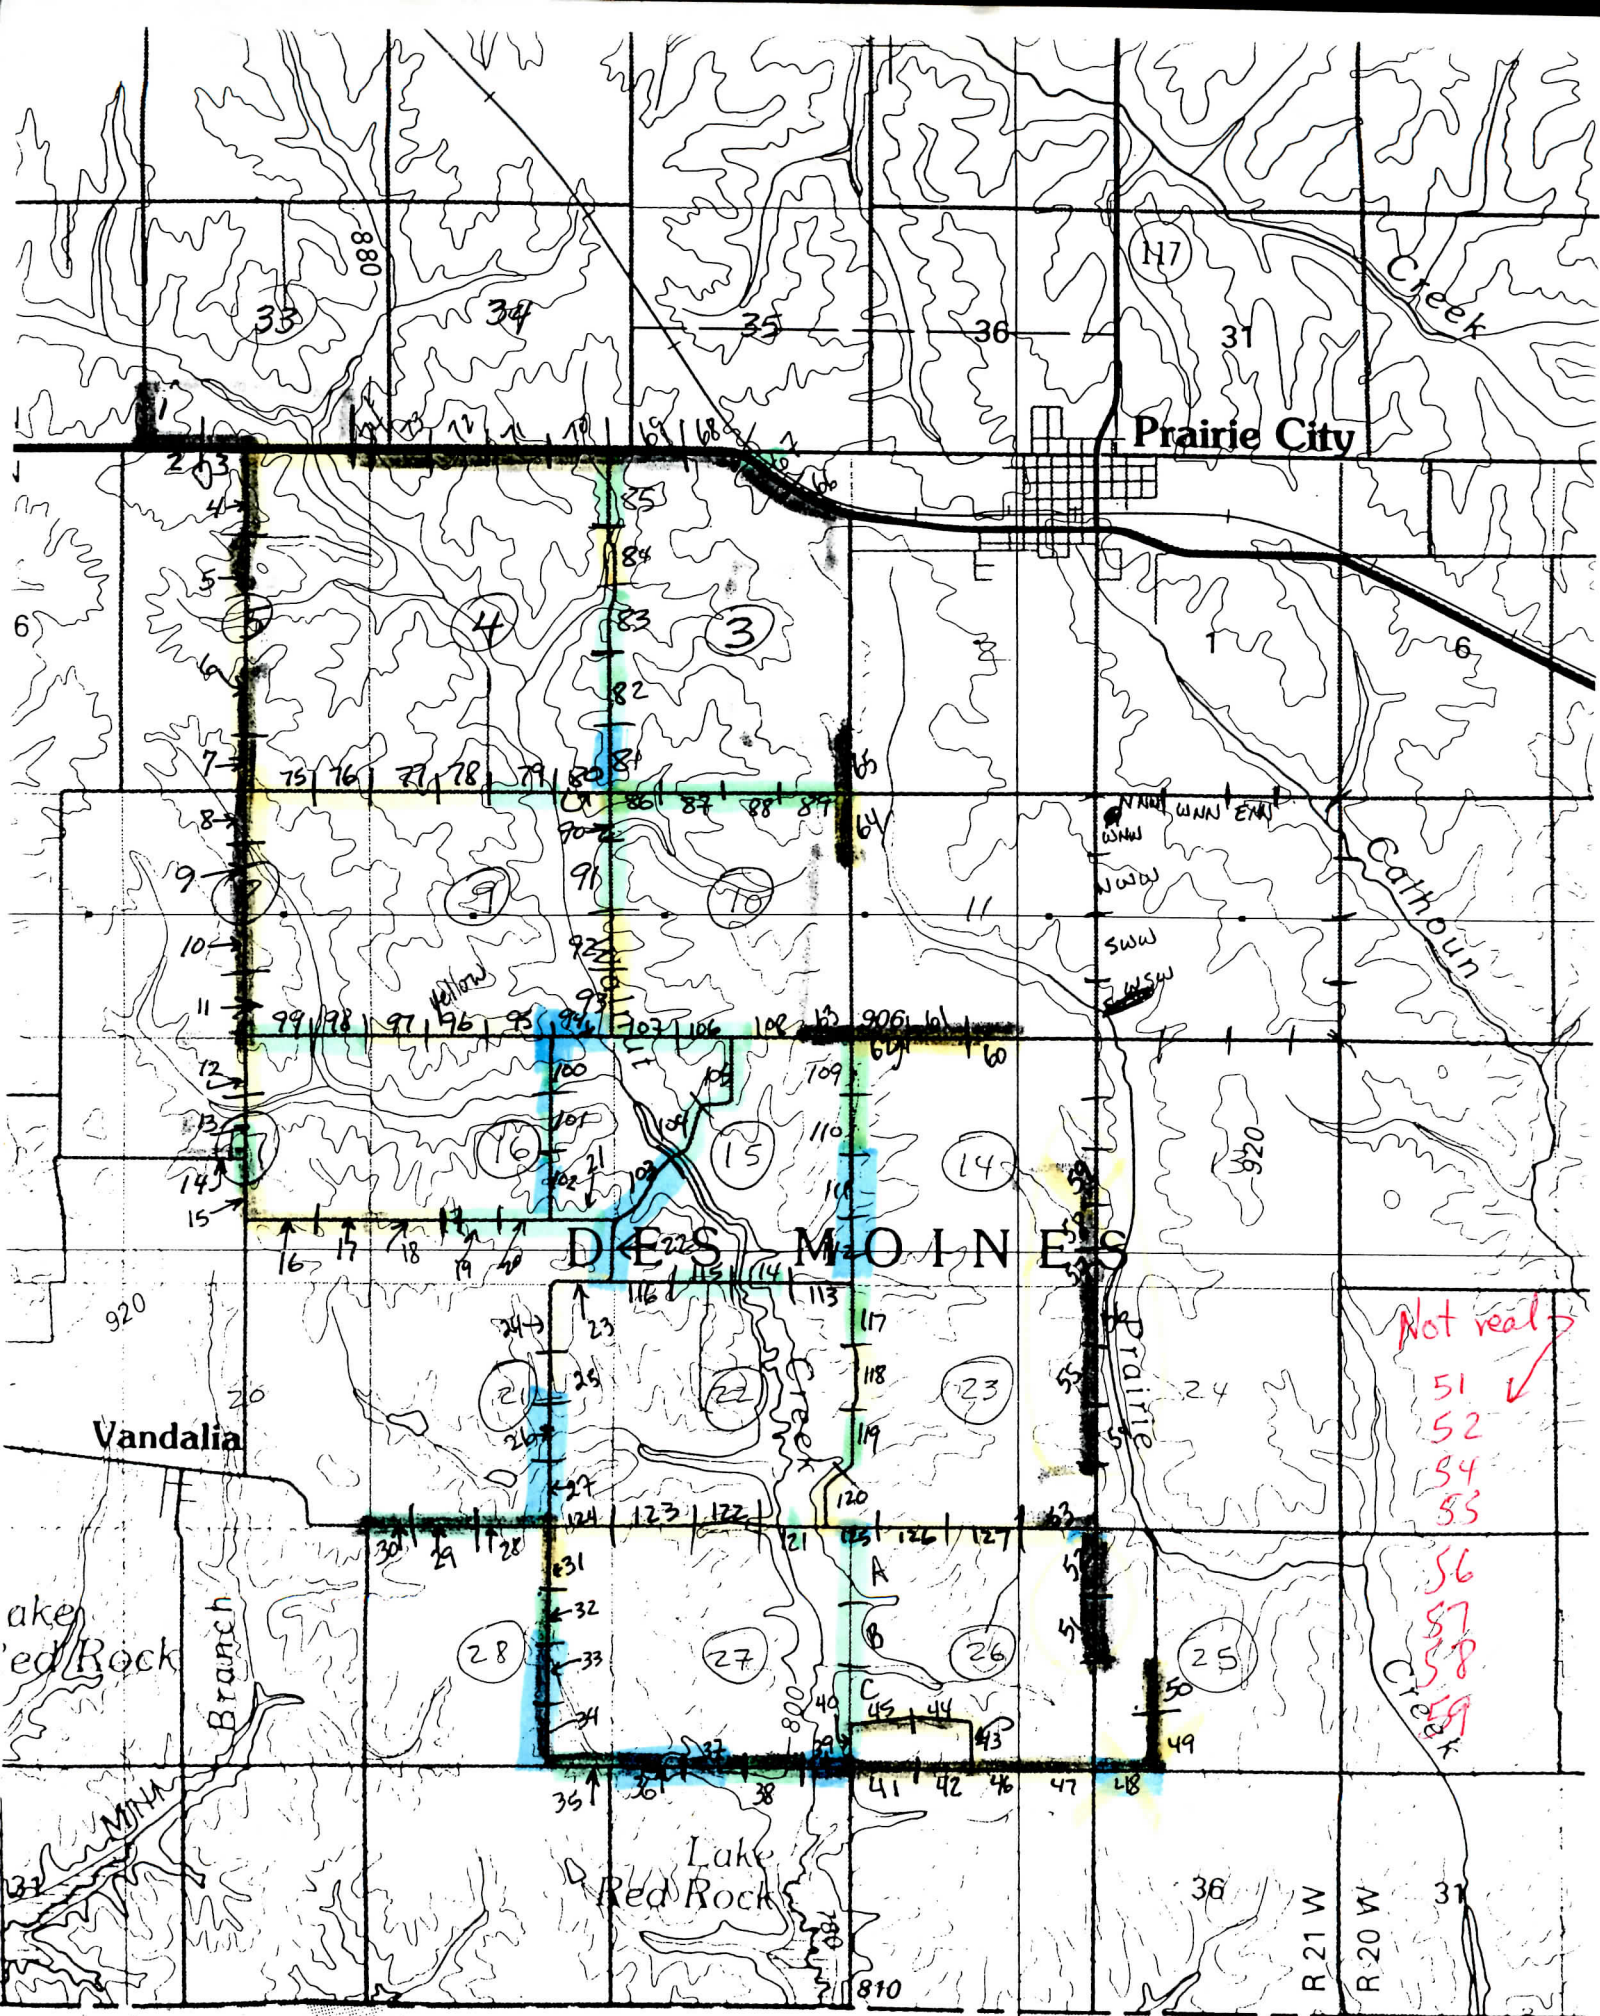

1. Individual register numbers (rows) correspond to the same plant type/species throughout the report. For example, #13 is big bluestem (*Andropogon gerardi*) and #35 is American bittersweet.
2. Column designators reference the roadside tract. Directional modifiers ("n", "s", "e", "w") indicate which side of the road that column's ratings apply. Exclamations (!) after a tract number indicate the two roadside information was pooled; for consistency, the column was duplicated and the duplicates were assigned a directional (n,s,w,e) modifier and the exclamation.
3. Ratings were assigned on a group consensus basis.

|                                                                   |
|-------------------------------------------------------------------|
| "1" = seldom (one to a few plants observed)                       |
| "2" = occasional (several plants or one or two significant clumps |
| "3" = predominant species in the tract. found)                    |
4. Column AL is an area-wide composite score across all tracts, accomplished by simple summation of ratings.
5. We excluded most prevalent annual weedy species common in a row-crop environment (i.e., foxtails [*Setaria* spp.], pigweeds [*Amarantus* spp.], etc.)
6. Tract locations are indicated on the attached map of the area.

- 
- Conducted by members of the Central Iowa Prairie Network
