LACREEK NATIONAL WILDLIFE REFUGE

12232

NARRATIVE REPORT

JANUARY, FEBRUARY, MAECH AND APRIL, 1957

I. GENERAL

A. Weather Conditions

The weather exhibited the usual extremes of the winter-spring season on the southwestern Dakota high prairies. Temperatures ranged from a ten-year low of -25 in January to a high of 70 in April. The January weather may be described as extremely cold and dry. The period February 1, to March 14, was unusually warm and dry, with temperatures ranging up to the sixties occasionally, and drouth conditions threatening. Then from mid-March to mid-April, a continuous series of snowstorms or near blizzards turned the countryside into a quagmire, resulting in the latest, coldest, and wettest, spring season in a decade.

Spring grain seeding is just getting under way the last two days of April, the latest we recall seeing farmers enter the fields here.

Following is a summary of weather conditions for the reporting period.

Month		ipitat:		Snow	Max.	Temp.	Min. Temp.	
	(rain o	r melto	ed snow)					
January		.18		est. 7"	••••	54		
February		.15		" 3"		61	••••• -10	
	Total	3.73		est.52"		70 Ext	remes -25	

B. Water Conditions

All four of the main pools, 7-8-9-and-10, were filled and overflowing spillways by the first of the year. Smaller units were raised to the desired levels by mid-April. Despite the heavy precipitation of March and April, runoff was not extremely heavy as much of the moisture soaked into the soil. Some surplus water was released through the 4 main spillways during April, and sections of the dikes took some minor cutting due to lashing by high winds. Ice went out of the main pools on March 10th,only to reform and persist until April. Following is a summary of water level readings at the four main pools as of the close of the reporting period for the past two seasons;

 Pool No.
 Level, April 30, 1956
 Level, April 30, 1957

 7
 7;14
 7;20

 8
 10;37
 10;50

 9
 10;38
 10;58

 10
 13;10
 13;30

The Little White River pool has been raised to a level approximately one foot below spillway elevation following extensive dike repairs last fall. It is proposed to initiate some experimental stocking of this unit in cooperation with the State and F.W.S. Fisheries divisions to attempt reestablishment of a sports fisheries area for local residents.

C. Fires

1

No fires occurred during the reporting period.

II. WILDLIFE

A. Migratory Birds

1. Populations and Behavior

a. Waterfowl

The Waterfowl flight was definitely influenced by the curious weather pattern, with mild summerlike temperatures prevalent in February, followed by the storms of late March and April. The flocks were driven to and fro in confusion as the birds alternately advanced and retreated with the late snowstorms and mild periods.

The flight commenced as early as January 28, when 100 drake Pintails were observed near the dam of Pool No. 7 at the wintering pen for our captive geese.

General notes on the spring migration are as follows.

First migration noted - Pintails (100) January 28.

Canada Geese, Mallards noted migrating as early as February 13th, when 250 "honkers" appeared at the refuge and some early movement noted among Mallards.

Flight normal or near normal for Canada Geese, Mallards and Pintails. Light or scattered for other species. Overall flight smaller than in 1956 due to late arrival of teal and scattering of other species out in the snow water pools or potholes filled by the heavy spring precipitation. Canada Goose flight was spectacular again, with many local residents apparently thinking the flight to be the largest ever. Smaller numbers were concentrated at the refuge, since the early mild period in February and early March caused the birds to scatter out more extensively over the countryside. It is possible that the overall numbers were as large, considering flocks on or in the vicinity of the refuge.

Following is a summary of the goose migration;

First Migration	February 13, 1957	250 birds
Buildup	February 17, 1957	5,000 birds
Peak Concentration	March 3-4, 1957	30,000 birds pos- sibly larger con-

centration if all scattered flocks in vicinity counted.

Main flight departed

March 8, 1957

10,000 birds remaining

Last observed as Migrants - week of April 14-20, 1957 100 birds.

Following is a summary of the buildup of the Lacreek Canada Goose spring concentration since 1948:

Year												P	eal	k Number	rs
1948		-	-	-	-	-	-	-			_	-		5,000	
1949		-	-	-		-	-	-	-		-	-		10,000	
1950	-	-	-	-	-		-			-	-	-		10,000	
1951	-	-	-	-	-		-		-	-	-	_		12,000	
1952	-	-	-	-	-		-	-	-	-	-	-		20,000	
1953	-	-		-	-		-	-	-	_		-		35,000	
1954	-		-	-	-	-	-	-	-	-	-	-		40,000	(plus
1955	-	-	-		-	-	-	-			-	-		40,000	
1956	-		utte	_	-	-		-	-		-	-		40,000	
1957	-	-		-	-	-	-	-	-	-	-	-	*	35,000	
														-	

* As indicated previously, this years concentration at the refuge appeared somewhat smaller due to scattering of the flocks during the mild weather in February and early March, with early arriving flocks pushing on to loiter on the prairie to the north. The total numbers of birds moving through may have equaled that of earlier years, some local residents asserting they had observed more birds than in previous seasons.

Following is a summary of the overall waterfowl flight for the 1956 and 1957 seasons;

	Species	Arrival (1956)	Date (1957)	Peak Con (1956) and D	centration ates (1957)	Romarks
	Canada Goose	2/22 (200)	2/13 (250)	3/7-17 (40,000 plus)	3/3-4 (35,000 plus)	Concentration somewhat more scattered than in 1956 flight.
	Mallard	dan dan dan gan	2/13	3/11-17 (20,900)	2/24-3/9 (20,000)	Migration sim- ilar to 1956 in overall numbers.
	Gadwall	3/22	3/21	4/7-21 (5,000)	3/24-4/15 (5,000)	Migration more re- tarded, scattered than in 1956.
	Pintail	2/21	2/28	3/18-24 (8,000)	3/31-4/6 (12,000)	Flight more scat- tered with advance and retard to form several peaks.
	Baldpate	week of 3/18	week of 3/10-16	4/1-20 (500)	3/24-30 (500)	Small, scattered flight.
	G.W. Teal	3/6	week of 3/3-9	3/25-4/7 (2,000)	3/31-4/6 (3,000)	Scatterd flight small numbers.
	B.W. Teal	4/4	4/22	4/17-23 (5,000)	4/25-30 (5,000)	Flight unusually late
	Shoveller	3/20		4/15-23 (5,000)	14/114-20 (5,000)	Small scattered flight as in 1956.
	Redhead	3/2	2/17	3/18-4/7 (6,000)	3/31-4/13 (2,000)	Considerably small- er flight this year.
	Canvasback	3/6	week of 3/3-9	3/18-31 (5,000)	3/31 - 4/13 (500)	Very small scatter- ed flight.
	Lesser Seaup	3/6	3/21	4/1-7 (10,000)	4/7-15 (8,000)	Flight smaller than in 1956 season.
	Goldeneye	intered a	wintered		1/13-26 (350)	Winters in small numbers at refuge.
100	Bufflehead	3/7	week of 3/3-9	4/1-7 (1,000)	2/31-4/13 (500)	Only observed in small numbers.

Ruddy Duck

¥,

No data.

B. Other Water Birds

The extremely late, cold spring season had appreciably retarded the spring migration of of ther marsh birds to April 30, the date this report was written.

No Grebes had been observed to date, an unusal migrational phenomena for these birds, which invariably appear in April during an average season

White Pelicans were later than usual, appearing from April 1],

Double-crested Cormorants returned during early April and appear to be more numerous this season.

Great Blue Herons returned on April 11, nearly two weeks later than usual.

Black-crowned Night Herons returned on April 23] a similarly late appearance.

The American Bittern returned on April 28.

The Sandhill Crane migration started on April 9 and was at its height on April 11, when some 5,000 birds stopped at the refuge. The Sandhill Cranes appear to concentrate on the Platte River in February and March and invairably move through the Lacreek Refuge area about April 10 regularly, regardless of weather conditions.

C. Shore Birds

The shore bird migration was almost nil up to April 30th except for the Killdeer, Long-billed Curlew, and a few Willets. We heard the call of a solitary Greater Yellowlegs on the evening of April 26 over the audio frequency amplifier system installed by the Air Force G.O.C. for plane detection.

The Long-billed Curlew arrival date was April 1; <u>Willets</u> returned April 23rd.

D. Other Birds

Other migrational notes are as follows; all are first migration dates:

Species	Date of Arrival
Ring-billed Gull	March 20,
Forsters Tern	April 26,
Barn Swallow	April 28,
Murtle Warbler	April 25,
Western Robin	wintered
Eastern Meadowlark	March 15.

5

Date of Arrival February 26, April 10, April 10,

The late cold spring has retarded migration considerably, and it is probable that many birds are lingering in the southern plains area pending permant clearing of the weather in this upper plains region.

2. Food and Cover

١.

Conditions were good for both wintering game and non-game species. No appreciable amounts of snow fell until late March and early April, and temperatures accompanying these spring storms were not unduly severe.

B. Upland Game Birds

1. Populations and Behavior

Ring-necked Pheasants surived the winter in excellent condition, with no noticeable losses.

Sharp-tailed Grouse are at the low point of a cycle, and very few are noted in the area. Our main nesting flock, located in the rattlesnake hill upland section of the refuge, had their booming ground (located just outside our boundary fence) disrupted by agricultural operations. Large tracts of virgin prairie adjoining the refuge on the west have been acquired by private interests and put under the plow the past year. The booming birds have moved to a new grounds on the refuge, but the flock appears reduced to a small remnant at present.

2. Food and Cover

Selected areas of wintering cover are maintained for upland game birds adjacent to grain or corn. Our 1956 farming operations were disrupted by hail and drouth, but late weed growth forming on our farming units provided a good source of winter food.

C. Big Game Animals

1. Populations and Behavior

Small herds of Mule Deer and a few White-tails continue to frequent the refuge area. The terrain and cover of this prairie refuge are not primarily adapted to use as deer range, but some numbers of the animals do utilize the area.

2. Food and Cover

Two wilderness areas totalling about 800 acrea are maintained on the refuge for wintering pheasants and deer.

D. Fur Animals, Predators, Rodents, and other Mammals.

Muskrat populations have increased from last year's low. Nearly 1,300 of the animals were secured by trappers this winter.

Mink have been more numerous, with the most sizeable number in years secured by trapping permittees.

Skunk are present in the lowest number in some time, according to Predator Agent Bill Pullins, who is initiating a survey of predators and control project to extent required. We have conducted a selective control project the past two seasons on skunk with beneficial results.

Raccoon population considered at 80% lower level than prior to 1955 initiated control project.

Beaver becoming more numerous annually despite control. Considerable damage caused to tree growth in recent years.

Weasel scattered individuals present at area. Both Mistela longicanda and rixosa present.

E. Predacious Birds

.

Golden Eagle wintered in usual small numbers 5 to 6 birds loitering on the area throughout the season. The first returning specimen was observed October 10th; the last observation was that of a single bird April 29th.

One to two Bald Eagles were observed throughout the winter. usually these birds occur as stragglers only, but the bird was observed weekly through the past winter season.

The Prairie Falcon is an occasionally observed permanent resident in the territory. Nesting occurs mainly in the rough badlands territory to the north, but solitary stray birds are observed almost daily.

Horned Owls are present in scattered pairs in the bottomland thickets.

Magpies are common, permanent residents in the territory.

Scattered Red-tailed and Swainsown's Hawks have been observed through the latter part of April.

Short-eared Owb-solitary individual noted through the spring season.

Burrowing Owls present as stragglers or small colonies in deserted prairie dog towns.

Sparrow Hawks were numerous during the last few days of April, usual migration peak for this species.

F. Fish

No winter losses eere noted among our fish populations.

Principal species are Yellow Perch, Large-mouth Bass, Suckers and Green Sunfish.

The pools still appear to be free of carp.

III. REFUGE DEVELOPMENT & MAINTENANCE

A. Physical Development.

1. Excavated, hauled and placed an estimated 600 yards fill on dikes 3,7, and 9.

2. Serviced and repaired equipment as required, including complete overhaul of Dodge Pickup motor, Replacement of motor in Jeep Pickup.

3. Complete renovation of refuge office, including removal of heating cubical, tiling of floor, two coat paint job.

4. Planted 30 ten-twelve foot trees as part of cover development program.

5. Constructed new basement room in quarters No. 3

6. Repaired fencing at Bear Butte Refuge.

7. Repaired phone line as required.

8. Gravelled courtyard of headquarters area with fresh gravel application of 90 tons

9. Removed snow from refuge road to limit deterioration of grade.

10. Made grain transfers from Sand Lake and Union Slough Refuges for feeding captive geese.

B. Plantings

1. Upland Herbaceous plants - Two clump blantings of Chinese Elm and honeysuckle were made near the headquarters gateway as a combined cover development and landscaping project.

2. Cultivated Crops - approximately 500 acres of Barley and Corn will be planted on a cooperative farming bases this season. Due to the unusually late season, no planting had been undertaken up to May first.

A. Grazing

1.

Grazing activities under the fall-winter permit system were terminated as of March 1st. An experimental grazing project on the margin of Units 2 and 3 will be continued following the annual breeding pair census to obtain further data on grazing-nesting relationships.

B. Fur Harvest

The annual fur harvest resulted in the following take. Muskrat were definitely up in numbers, resulting in a considerable higher catch than for some years past.

Species Trap	pers Share	Proceeds	Refuge Share	Proceeds
Muskrat (1291)	636	\$ 378.40	655	
Mink (35)	18	sales data incomplete	17	1 3
Skunk (40)	40	destroyed		
Weasel (2)	2	l sold for l destroyed		
Raccoon (16)	16	6 unsold 3 sold for 5 sold for		
Beaver (13)	7	l sold for 6 sold for		
Badger (5)	5	\$ 20.10		

Sales records of the fur auction Co. have not been received up to close of the reporting period for Refuge furs.

Six coyotes were taken by P.R.C.Trapper, Wm. Pullins, by getters during the winter season.

V. FIELD INVESTIGATION

Straggling returns continue to come in on the experimental Redhead ducks transferred here in the summer of 1954. The last two reports come from Salt Lake, Utah, and Sonora Mexico. A total of 54 returns have now been received from these 305 birds transferred from the Delta Station.

All banding records for the station were summarized in table form by species and locations. A total of 674 birds had been recovered representing 14 species, taken in 40 localities, including Mexico, British Honduras, and the West Indies. A copy of the banding summary is inserted. •

The official bird list for the Lacreek Refuge was completed and published during the reporting period. 207 regularly listed species and 6 rareties are included in this list. The twenty years of refuge records probably comprise one of the most complete records of local avifauna for the Pine Ridge Reservation region of South Dakota. A copy of the officially published list is inserted.

The Skunk-Raccoon control program will be covered under a separate report in the near future, as the 1957 work in incomplete as yet.

VI. PUBLIC RELATIONS

A. Recreational Uses

The winter ice fishing season and some early spring use of the Dike 10 zone constituted chief recreational use during the reporting period.

Ice fishing success was very poor this season, with very few fish taken. However, the bass are now hitting in the small dike 10 fishing zone above the main outlet dam, with numerous 2-5 lb. specimens taken.

B. Refuge Visitors

A list of official visitors follows;

Name	Organization	Purpose of Visit
H. Haecker	F.W.S PRC	Courtesy calls
Wm. Pullins	F.W.SPRC	Predator control
Geo. W. Wiseman	F.W.SVal. Refuge	Seed Harvest
Richard Rodgers	F.W.SCrescent Lake	Courtesy call
Mr. Rodgers, Sr.	F.W.S Turnbull	Courtesy call
S/Sgt Dean Schultz	USAF - G.O.C.	Inspect G.O.C. Post
S/Sgt Hearnberger	USAF - G.O.C.	1
James A. Dawd	S.D. Game Commissioner	
Tony Engelbert		accompanying commissioner
Maurice Anderson	State Game Technician	Courtesy call

Occasional unrecorded parties of civilian visitors also called to look at the captive goose flocks, waterfowl concentrations, etc. Attractious road and weather conditions in March and April limited visiting considerably. Dr. and Mrs Whitney of Rapid City Bird Club, visited the area in February to view the waterfowl and eagles and help plan the program for the annual SDOU program.

C. Refuge Participation

Our principal public relations activity this period has been the organizing of the annual meeting of the State Ornithologists Union scheduled at the refuge on May 18 and 19, 1957; copies of the program and general schedule are attached. This meeting will bring a number of the leading bird students and conservationists of South Dakota to this area and familiarize the visitors with refuge operations. Refuge personnel have also participated in the G.O.C. program, maintaining an aircraft spotting post at the station and telephoning in all passing aircraft to the Filter Center at Sioux Falls, South Dakota.

The monthly meeting of the local Rod and Gun Club have been attended by refuge personnel and films shown at the meetings. Talks were given on items of interest concerning the refuge at these gatherings.

Families of personnel have been active in local extension club work and recently organized a drivers safety meeting at the LaCreek Valley 4H Clubhouse, in cooperation with local representatives of the State Highwad Departement. Several films on safe tractor and auto operation were exhibited to an audience of local farm and ranch people. This meeting was held on April 26 and was enthusiastically endorsed by all who attended.

A cooperative arrangement was effected with the Rapid City Bird Club whereby our refuge banding returns will be plotted on maps for use in public exhibition and talks before schools, bird clubs, sportsmens groups etc.

D. Hunting (Inactive this period)

E. Fishing

The winter ice fishing was unsuccessful this season, with very few fish taken. The bass and perch were present, but refused to cooperate with the fishermen.

As the spring fishing season opened in April, bass and a few perch have started hitting at the Dike 10 public fishing zone, with limited catches by many fishermen.

F. Violations

Some patrol work was necessary to check rabbit hunters during the winter months. A party of hunters was picked up near our boundary by the state highway patrol and warden and fined in local court. This effectively stopped the illegal night hunting nuisance in the territory.

MBTA patrol work was done to the extent permitted by road conditions to watch the spring goose flight. A rumor originated among residents that the flocks were being watched by Federal Wardens in planes after a low flying plane traversered the countryside. This acted as a deterrent to scattered sniping, and little illegal activity was heard of this spring.

VII. OTHER ITEMS

Refuge personnel were awarded certificates and pins for 250 hours duty in plane spotting service for the G.O.C. at a neeting of Bennett County Observation Posts held at the refuge in February. The Air Force representatives conducted a training meet and awards ceremony at this time for all local posts in the county. The Service building garage compartment was utilized as an "auditorium" for the event.

The Refuge office, which was limited for space by an obsolete heating cubicle, was remodelled and renovated. Separate office space was arranged, and the room now affords an attractive businesslike arragement, with adequate space for small public meetings. This improvement was recommended by the Service during the last station inspection.

The Little White River Unit has been filled to capacity and is already receiving some use by local boating enthusiasts. Plans are underway for stocking of this pool during the coming season to attempt reestablishment of sports fisheries facilities for local residents. This unit originally served as a recreational area, but fisheries facilities were lost by siltation and carp infestation. An eradication project was undertaken last fall to remove rough fish, and the area is now ready for renovation. It is hoped that the area can be successfully renovated and recreational use shifted to this zone by next season.

Respectfully submitted:

May 6,	1957
(date	3)

Approved: nature

12

VIII. SPECIAL INFORMATION SECTION

A. Status of Captive Goose Flock

A second flock of 41 immature Canadas was brought to the Refuge from Swan Lake late in 1956.

The birds were wintered in a holding pen below dam No. 8. Two specimens were lost during the winter due to unknown causes, leaving 38 birds. These are scheduled for release in early 1959.

The old flock of mixed adult - immature birds held here two seasons was released on the lake this spring and totals 65 birds at last count Some of the birds have scattered out in the marshes, and part of the flock maintains a closely associated raft or formation. Evidence of nesting will be sought by boat inspection of the marshes in the near future after the flock has settled down a little more.

B. Browse Preference

Our migrant goose flock exhibit preference for winter wheat during spring migration. Very little alfalfa feeding was noted in spring, as the flight moves through in advance of the greening up of the plant to stage preferred for browse.

Birds of Prey

This section covered under a section in main body of report.

INSTRUCTIONS

Form NR-2 - UPLAND GAME BIRDS.*

(1) SPECIES:

Use correct common name.

(2) DENSITY:

Applies particularly to those species considered in removal programs (public hunts, etc.). Detailed data may be omitted for species occurring in limited numbers. Density to be expressed in acres per animal by cover types. This information is to be prefaced by a statement from the refuge manager as to the number of acres in each cover type found on the refuge; once submitted, this information need not be repeated except as significant changes occur in the area of cover types. Cover types should be detailed enough to furnish the desired information but not so much as to obscure the general picture. Examples: spruce swamp, upland hardwoods, reverting agriculture land, bottomland hardwoods, short grass prairie, etc. Standard type symbols listed in Wildlife Management Series No. 7 should be used where possible. Figures submitted should be based on actual observations and counts on representative sample areas. Survey method used and size of sample area or areas should be indicated under Remarks.

BefureLaGroek Mational Wildiffe Heftere

- (3) YOUNG PRODUCED: Estimated number of young produced, based upon observations and actual counts in representative breeding habitat.
- (4) SEX RATIO: This column applies primarily to wild turkey, pheasants, etc. Include data on other species if available.
- (5) REMOVALS: Indicate total number in each category removed during the report period.
- (6) TOTAL: Estimated total number using the refuge during the report period. This may include resident birds plus those migrating into the refuge during certain seasons.
- (7) REMARKS: Indicate method used to determine population and area covered in survey. Also include other pertinent information not specifically requested.
- * Only columns applicable to the period covered should be used.

FORM NR-4

(June 1945)

Refuge

Applies particularly to those species considered in removal programs. Detailed data may be omitted for species occurring in limited numbers. Density to be expressed in acres per animal by cover types. This information is to be prefaced by a statement from the refuge manager as to the number of acres in each cover type found on the refuge; once submitted, this information need not be repeated except as significant changes occur in the area of cover types. Cover types should be detailed enough to furnish the desired information but not so much as to obscure the general picture. Examples: spruce swamp, upland hardwoods, reverting agriculture land, bottom land hardwoods, short grass prairie, etc. Standard type symbols listed in Wildlife Management Series No. 7 should be used where possible. Figures submitted should be based on actual observations and counts on representative sample areas. Survey method used and size of sample area or areas should be indicated under Remarks.

- (3) REMOVALS: Indicate the total number under each category removed since April 30 of the previous year, including any taken on the refuge by Service Predatory Animal Hunter. Also show any removals not falling under headingslisted.
- (4) DISPOSITION OF FUR: On share-trapped furs list the permit number, trapper's share, and refuge share. Indicate the number of pelts shipped to market, including furs taken by Service personnel. Total number of pelts of each species destroyed because of unprimeness or damaged condition, and furs donated to institutions or other agencies should be shown in the column provided.
- (5) TOTAL POPULATION: Estimated total population of each species reported on as of April 30.

Reported by

BIRDS OF THE LACREEK NATIONAL WILDLIFE REFUGE

Lacreek National Wildlife Refuge is located in southwestern South Dakota's historic Fine Ridge Sioux Reservation region near the Nebraska border. The area, which contains 9,442 acres, was established in 1935 as a unit in that part of the Federal refuge system extending over the Great Plains States to protect bird life of the western prairies.

The refuge is situated in a valley bordering the extreme northern margin of the Nebraska sandhills which fringe the interstate boundary in this locality. It includes the 5,000-acre Lacreek Lake and marsh, fed by spring creeks emerging from the adjacent sandhills, a bordering expanse of short grass upland prairie on the north and east, with the sandhills rising abruptly along the southern boundary.

Portions of the original lake bed consisting of damp lowland meadow and dense cattail, bulrush, and slough grass growth intersected by winding creek channel were deepened by construction of dikes to form an impoundment system of ten pool and marsh units. Water control gates permit maintenance of all types of aquatic habitat from open water areas to shallow flooded marshland. A number of nesting islands were formed by partial inundation of hummocks and knolls.

The area is relatively treeless except for a few willow groves or fringes on the lowlands and small upland shelterbelts. Important types of habitat include the lake and marsh, lowland meadows, deciduous tree fringes, remnants of original short grass prairie, and sandhills. This diversity and the location along the geographical dividing line between the ranges of eastern and western bird life results in a varied avifauna, with some hybridization apparent among such forms as the flickers, orioles, and juncos. Arboreal species are not abundant in this high plains region, occurring chiefly as migrants in the scanty tree growth during the seasonal migrations.

Principal bird attractions at this refuge include the western grebe, a pelican-cormorant colony, herons, bitterns, occasional egrets, the large seasonal waterfowl migrations, birds of prey, including both eagles and the prairie falcon, grouse, pheasants, various migrant and summer resident shorebirds, including the long-billed curlews, willets and avocets. Lark buntings and sparrows are numerous on the uplands.

The spring and autumn migrations, and the late summer concentrations of shorebirds and swallows are perhaps of most interest to visitors, though concentrations of bird life may be observed at all seasons. Sizable numbers of waterfowl, chiefly mallards, goldeneyes and mergansers remain through the winter in open channels below the spillways; and birds of prey, notably the eagles, are prominent at this season. Other seasonal attractions include the nesting cliff and barn swallows about the headquarters buildings and the colony of eastern meadowlarks frequenting the lowland meadows whose subdued calls contrast distinctly with the loud ringing carols of the western birds on the adjacent uplands. The refuge may be reached over U. S. 18 through southern South Dakota, or via U. S. 20 through northern Nebraska, turning off on State 73 between Martin, South Dakota, and Merriman, Nebraska. Proceed to a refuge directional sign midway between the two towns, then drive six miles east to refuge headquarters. Eating and lodging accommodations are available at the town of Martin, 13 miles northwest of the refuge. Public picnic grounds are maintained at the station, and camping grounds are available at the public recreational zone five miles north of refuge headquarters.

The following list contains 207 species compiled by refuge personnel through field observations from 1936 to 1956. Six other species considered rare or accidental are added at the end of the list. Birds which have nested on the refuge are indicated by an *. Species names are in accordance with the Fifth A.O.U. Check-List. Seasonal abundance symbols are as follows:

PRELIMINARY ANNOUNCEMENT OF ANNUAL MEETING

SOUTH DAKOTA ORNITHOLOGISTS UNION

As announced in the last issue of "South Dakota Bird Notes", the next annual meeting of SDOU will be held at LACREEK NATIONAL WILDLIFE REFUGE, MARTIN, S. DAKOTA, MAY 18-19, 1957. A program committee including President Charles Crutchett, Armour; Dr. N. R. Whitney, Rapid City; Mr. J. O. Johnson, "Jatertown; and the Refuge Manager at LaCreek, has been working out details of the program.

Formal program, the annual business meeting, and field trips will be held at the refuge 13 miles southeast of Martin. The annual banquet is scheduled for Saturday evening, May 18 in the American Legion Auditorium in the town of Martin. Local hotel and motel facilities and the new auditorium assure us of satisfactory accommodations for our SDOU meeting. Arrangements have been made with local cafes for early morning breakfasts, and picnic lunches are planned at the refuge to limit noon hour travel. You will be provided a little later on with copies of the program, local accommodations, travel routes, etc.

This year's meeting will emphasize bird life of the state's southwestern shortgrass prairie and sandhills border region and opportunities for bird study in our National Wildlife Refuges and Parks. A varied program of speakers, films, and slides is being arranged through our SDOU membership, the Fish & Wildlife Service and National Parks. A period of volunteer bird notes from members of the audience is also planned.

Field trips will be organized for observation of the varied bird life of this national wildlife refuge, situated at 3200 feet altitude in a local transitional zone between sandhills marsh and arid upland prairie. You will be able to observe all types of bird life from marsh and water birds and arboreal forms frequenting the tree fringes to typical species of the short grass prairie. There will be Curlews, Avocets, Willets and the isolated colony of Eastern Meadowlarks, whose subdued calls contrast distinctly with the loud ringing carols of the Western bird on the adjacent uplands.

The main entertainment feature at the Saturday evening annual banquet will be songs and dances of the Sioux by a delegation of Oglalla Sioux Indians lead by Chief Black Elk who will interpret for us and give a brief talk on Indian lore and names of some of the prairie birds.

You will want to see the bird life of this national wildlife refuge on southwestern South Dakota's sandhills border. You will want to attend the program and partake of the field trips. You will want to see the Sioux Indians perform their tribal dances. So why not plan your itinerary now to include the ANNUAL MEETING OF SOUTH LAKOTA ORNITHOLOGISTS UNION AT LACREEK NATIONAL WILDLIFE REFUGE ON MAY 18-19, 1957.
