M E M O R A N D U M

TO: Tim Wilkins, Refuge Manager
FROM: Ron Seiss, ^{RS} District Biologist
DATE: June 19, 1990
SUBJECT: Benoit Deer Data and Seed Request

Attached is the 1989-90 deer harvest summary for Benoit Hunting Club. Data collection by the club was poor and may not accurately reflect the harvest. If additional data from previous years is desired, please contact me. Harvest data on file dates back to 1967.

Please consider the following request for seed:

wheat - 125 bushels
milo - 20 bushels
corn - 20 bushels

Seed will be used for wildlife food plantings, waterfowl trapping and banding, and turkey trapping throughout the Delta.

Thank you for the wood duck boxes and seed. The cooperation with our department is greatly appreciated and results in additional wildlife benefits being provided. I look forward to working with you in the future.

Department of Wildlife and Fisheries

Mr. Stephen W. Gard
Mississippi Wetland Management District
U.S.D.I. Fish & Wildlife Service
P.O. Box 1070
Grenada, Ms. 38901

Dear Steve:

I have examined the Dahomey Refuge data. Herd condition appears to be in slightly poorer shape than in previous years. Body weights are lower than previous years. Reproduction was very poor. Although does did not have fetuses present when we examined them during the hunt, most had corpora lutea. Luteal counts averaged 1.33 per yearling doe and 1.63 per adult doe. This was very low. Under normal circumstances, only about 90% of corpora are associated with fetuses. Thus, actual fetal count would be lower than the corpora count. Lactation rates also were low. No yearling does and only 44% of the adult does were lactating.

The Dahomey population has been characterized in the past, as a heavily exploited buck population and under exploited doe population. The data collected during the 1991 ether sex hunt suggest that is still the case.

I would suggest that buck harvest should be limited and doe harvest increased considerably in 1992. The herd appears to have a highly distorted sex ratio in favor of females and need general reduction. A reasonable doe harvest goal would be about 200.

I hope this is of assistance. Please feel free to call if there is anything else I can do, or if you require further specifics. I will try to visit this summer and examine the habitat on the area with you.

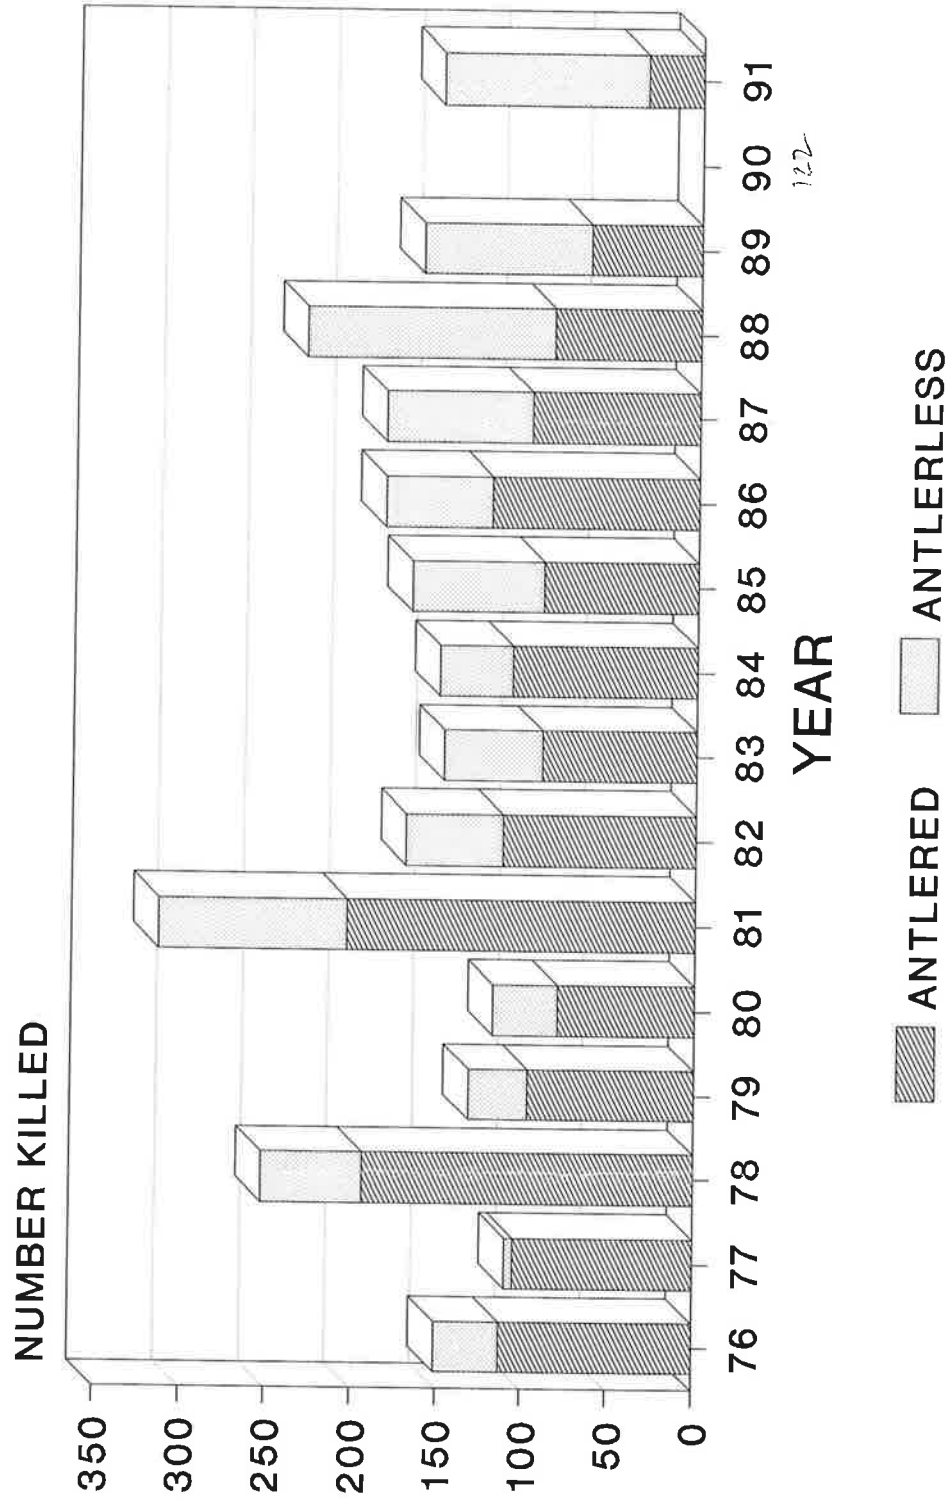

Sincerely,

Harry A. Jacobson
Professor
